SGYP: 1Q12 Update - No Surprises, Favorable Financing In Rear view Mirror

SGYP reported an uneventful 1Q12. The company did, however, recently complete a favorable financing, in our opinion. We maintain our Buy rating as we believe that plecanatide is an under-appreciated asset for the treatment of constipation.

- 1Q12 results (10-Q filed) Uneventful. SGYP reported no 1Q12 revenues as expected. R&D was about \$700K below our target, and SG&A was inline. The net was a penny smaller EPS loss than we targeted at minus \$0.13. We viewed the results as not particularly material.
- Pipeline on track. We continue to target phase 2/3 clinical data for the constipation drug SP-304 in 4Q12. That is the main lever for SGYP shares. That said, we also look forward to phase 1 data for the ulcerative colitis treatment SP-333 in 4Q12. We view SP-333 as an under-appreciated compound that could create value in outer years.
- Model changes. Minimal changes from prior expectations. EPS and revenue targets are largely unchanged.
- Favorable financing. The company completed a ~\$50 million financing in May 2012 that netted the company ~\$45 million at \$4.50/share. We view this favorably, as it removes a near-term risk and the pricing was better than our prior \$4/share expectation within our model. The company benefited from a recent up-tick in share price.
- Maintain Buy rating. We continue to view plecanatide as an undervalued asset within the gastrointestinal arena. We believe that this compound could have similar efficacy to FRX/IRWD's linaclotide with potentially less diarrhea side effects.

VALUATION

We value shares of Synergy Pharmaceuticals based on a sum-of-the-parts analysis. The main driver is plecanatide at \$10/share with lesser contribution from SP-333 (\$1.50/share) and future indications/technology value (\$0.50/share).

Impediments to our price target include, but are not limited to, unexpected adverse clinical outcomes, inability to attain a partnership, and inability to raise additional financial resources on reasonable terms.

RISKS

In addition to the risks inherent in drug development and marketing, key investment risks for Synergy Pharmaceuticals include:

- Clinical risk We anticipate positive clinical data for the plecanatide program. Further, the phase 2/3 clinical data is longer in duration, which adds risk beyond the early stage trials. Failure of this data to match expectations could have a material adverse impact on company shares.
- Partnership risk We expect that Synergy will outlicense, partner, or sell its clinical programs prior to product launch. Failure to monetize these assets on favorable terms could have a material adverse impact on company shares.

COMPANY DESCRIPTION

Synergy Pharmaceuticals, Inc., a development stage biopharmaceutical company, focuses on the development of drugs to treat gastrointestinal disorders and diseases. It is developing plecanatide that completed Phase 2a clinical trial and is undergoing a Phase II/III clinical trial for the treatment chronic idiopathic constipation and constipation-predominant irritable bowel syndrome; and SP-333, a second generation GC-C receptor analog, which is in pre-clinical stage for the treatment of gastrointestinal inflammatory diseases, such as ulcerative colitis. The company is headquartered in New York, New York.
